FEEDING DIRECTIONS - FEED TWICE DAILY HERD REPLACEMENT CALVES

AGE OF CALF

4-7 Days:
2-4 Weeks
5-6 Weeks

CUPS/MILK REPLACER

1.5 Cups Mixed With
2 Cups Mixed With
1.5 Cups Mixed With

WARM WATER (105°C)

3 Pints of Water
4 Pints of Water
4 Pints of Water

GENERAL RECOMMENDATIONS:

Calves should receive about 3 lbs. Colostrum milk (105°) twice daily for first 3 days. Vary the amount of colostrum according to size of calf.

For calves weighing less than 70 lbs., feed about one third less milk replacer and one third less water than given below.

Use the measuring cup included in each bag for convenience in measuring.

Calves can be weaned after four weeks of age provided they are in good physical condition and are consuming 1.5 to 2 lbs. of good quality calf starter daily.

IF CALVES DEVELOP SCOURS:

Reduce the amount of milk replacer and water by one half for one to two days depending on the severity of the scours.

NOTE:

Clean pails thoroughly after each feeding.

Small amounts of dry calf starter, good quality hay and clean water should be available, starting at one week of age.
